EcoCAT

PINE PELLET LITTER

MADE IN
CHILDERS
QUEENSLAND

Oreco EcoCAT Pine Pellet Cat Litter is all natural - made from unused pine plantation waste and other untreated pine selections from sawmills all over QLD.

The long lasting, absorbent 6mm pellets combat odours while masking with a pleasant pine aroma.

The best part? Once the pellets have done their job, the waste material can be given a second life! Once composted, the material can be used as a garden mulch!

Purchasing this product helps contribute to environmental sustainability.

DID YOU KNOW?

Sawmills create a lot of waste during the milling process and that waste material is traditionally burned when it is unviable to be transported and used.

Oreco Group has put out fires across a number of industries including timber and sugar cane trade. We create a new purpose for the waste, using it to help create our high quality products - all in an effort to contribute to the circular economy.

At Oreco Group, we are passionate about a sustainable future. We assure product quality by being hands on from start to finish. We are proud to offer an eco-friendly alternative that reflects our commitment to protecting the planet and its resources.

132 years ago, a large QLD sawmill started a fire to help manage their excess wood waste. Recently, Oreco Group helped that sawmill put the fire out - simply by adding some of their excess pine to our products!

Available in two sizes:
